## PREFACE

The purpose of this bibliography of Cooperative Extension Service literature is to provide a ready reference source for those interested in the conservation and management of our wildlife, fish and forest resources. Intended users include Extension Specialists, educators, and natural resource managers and administrators at local, state and national levels. However, it is anticipated that the ultimate audiences will be private landowners in both urban and rural environments, target groups of adults (e.g. sportsmen clubs, environmental organizations) and youth (e.g. 4-H, elementary and high school students), and the general public.

The need for this bibliography is rooted in the omnipresent problem of habitat losses in both urban and rural settings, and in opportunities to avoid or mitigate such losses. Wildlife, fish and forests are products of the land just as are cultivated crops and domesticated livestock. Species diversity and distribution make virtually every acre of land and water potential habitat. Although the perceived value of each species may vary with time and place, such values are nonetheless real and may be economic, esthetic, social, ecologic, or recreational in context and scope. To preserve these values requires education and understanding of their worth. This bibliography identifies literature which may be used to achieve that goal.

The 1,163 entries in this bibliography consist exclusively of literature generated by Extension Specialists in each of the forementioned resource areas. These publications have been prepared in keeping with the expressed mission of the Extension Service—public education and assistance in problem solving and decision making. The resultant reference document should alert users as to the availability of existent literature, encourage its use directly, or suggest opportunities for its adaptation and use as conditions and locales change. This will promote more efficient use of published materials and minimize duplication of effort. At the same time, voids in publication needs should become more obvious and provide Specialists with incentives to fill such gaps as circumstances warrant.

Requests for relevant publications in the areas of wildlife, fish, and forest resources were sent to Extension Specialists in each state in 1981 for inclusion in the First Edition of this bibliography published in April, 1982. That edition was subsequently circulated to Extension Specialists in each state in 1985 and additions, corrections, and deletions are reflected in this Second Edition. No attempt was made to search out or include publications other than those provided by Extension Specialists. This was done to avoid inclusion of out-of-print, outdated, or otherwise unavailable materials. Furthermore, only literature published by Cooperative Extension, or authored by Extension Specialists but published by other sources, is included herein. Although Specialists may distribute other pertinent literature through their offices, such publications did not come under the purview of this bibliography. And finally, Sea Grant Publications were not included because our methods of solicitation for materials did not uniformly reach Sea Grant representatives. Future editions of this bibliography may be expanded to accommodate these important publications.

In an attempt to increase the utility of this bibliography, each major subject category is begun on a new page wherever practical. Complete sections may therefore be reproduced for use by individuals or groups having specific interests. Such material may be reprinted without permission but credit would be appreciated.

Support for this project was provided by Cooperative Extension Programs and the College of Agricultural and Life Sciences, University of Wisconsin-Madison; Natural Resources Unit, Extension Service, U.S. Department of Agriculture, Washington, D.C.; and the Office of Extension and Publications, Fish and Wildlife Service, U.S. Department of Interior, Washington, D.C. Gratitude is extended to Sue Boshers and Sue Dahmen for many retypes of the bibliography; to James Miller (Program Leader, Fish and Wildlife, Extension Service, USDA) for his assistance in all phases of the project; and especially to all Extension Specialists whose outstanding cooperation in submitting materials made the bibliography possible.

## CITATION FORMAT

Publications are listed only once according to the most appropriate subject matter, and then alphabetically by author. Exceptions are those sections on Animal Damage Control and 4-H and Youth Literature where references are listed by state, and then alphabetically by publication type (i.e., bulletin, circular, fact sheet, leaflet, etc.) and numerically within the latter. This was done to facilitate reader reviews of extensive series frequently produced by the different states. Otherwise the following apply:

Smith, J. D. 1981. WI  
(author, date, state abbreviation; reprinted or revised publications are indicated following the date; publications designed specifically for NATIONAL or REGIONAL application are so designated in place of the state code)

*Wildlife Resources of Wisconsin*  
(title of publication)

CES, University of Wisconsin, Madison  
(publisher and location; the CES acronym refers to Cooperative Extension Service and AES refers to Agricultural Extension Service)

12 pgs. C-3401. \$0.50.  
(number of pages, publication identification code, cost of publication; the letters in the publication code generally refer to the following: C - Circular; FS - Fact Sheet; L - Leaflet; N - Note; S - Series);

## ORDERING INFORMATION

In most cases, Extension Specialists or other authors do not serve as the distribution point for publications. Unless indicated otherwise, single copies of publications are usually available to residents of the respective states free of charge and may be ordered directly from the Cooperative Extension Services as identified in the citation, or obtained at County Extension offices. Non-residents may ensure a reply of publication availability by enclosing a stamped, self-addressed envelope. Where provided by the authors, prices are indicated as part of the citation.

# WILDLIFE CONSERVATION AND MANAGEMENT

Since the settlement era, intensive and conflicting human uses of land and water have severely altered or destroyed fish and wildlife habitats so that many animal populations have been reduced on local, regional and national levels. Foremost in this regard has been the conversion of native plant communities for agricultural and urban development. Prairies have been plowed, wetlands drained, and forested lands often harvested with little regard to fish and wildlife needs. As a result, some species have been extirpated, others have been reduced to endangered status, and some have reached pest proportions. If animal populations are to continue to thrive, immediate and innovative measures must be taken to ensure habitat protection, maintenance, and enhancement. A wealth of Extension literature is available precisely for this purpose and is referenced here for use by private landowners and resource managers alike.

This manual contains 43 systematic, progressive les-  
son plans covering a wide range of subjects from firearms  
know-how to ethical sportsman behavior to the role of  
sports hunting in the applied science of wildlife manage-  
ment. The lesson plans and 34 laboratory activities are  
arranged in 12 units as shown below. Also, there are more  
than 100 illustrations suitable for duplication to enhance  
the learning process. The material provides for as much  
as 150 hours of activities and further student participa-  
tion is encouraged by the list of 132 references. The man-  
ual is suitable for use with veteran sportsmen, youth in  
schools, 4H Clubs and others. The unit categories from  
the table of contents is provided here as an index to the  
scope of the manual.

# FISH CONSERVATION AND MANAGEMENT

Literally thousands of fish ponds are constructed on private lands in the United States each year. Because of spiralling energy costs and more intensive competition for existing fishing opportunities on public lands, this trend is likely to continue and even accelerate in coming years. Some ponds are excavated while others impound water from surface runoff or existing watercourses. Most are designed specifically for the production of fish or bait, but some are planned to provide wildlife benefits as well. Many ponds never reach their full production potential and are abandoned by disgruntled landowners. Bait producers and other aquaculture enterprises have also suffered setbacks when biologic and economic factors impact upon their operations. In the course of constructing and managing ponds and streams for fish and aquatic life, a variety of problems may be avoided with appropriate use of existing information. The following publications are intended for this purpose.

# FOREST CONSERVATION AND MANAGEMENT

Forest ecosystems provide important habitat for a wide variety of wildlife species. Through proper harvest and management strategies, the value of forests to wildlife can be enhanced with little or no economic loss to the landowner. Tree plantings and landscaping in both the rural and urban environments can likewise increase the quantity and quality of habitat available to wildlife. Accordingly, the following publications may provide useful information to private landowners who wish to consider the development, retention, and enhancement of wildlife habitat as legitimate forest management goals.

## 4-H And Youth Literature

Fish, wildlife and forestry Extension Specialists have major programming responsibilities with 4-H and youth groups in virtually every state. Leader's and member's guides on various aspects of resource conservation and management have been developed to meet the needs of this clientele, but such literature has application to other interest groups as well. Similarly, publications produced in one state may have widespread use in others with little or no modification. Indeed, publications prepared by the Southern Regional 4H Wildlife Literature Committee are currently being used in precisely this manner.
